

Job Description;
Senior Web Developer
December 2007

About us

To give you some context, **dub** creates white label **social networks** for brands and business. The big idea is that these 'platforms' facilitate new conversations between clients and their users, consumers and staff. These can subsequently be appropriated to benefit **Research**, ie generating insights, **Customer Relationship Management** and **Internal Communications**.

dub was set up by Stephen Cribbett and Tom Watts, refugees from research, branding, design and digital worlds. They saw the opportunity, brought about by new technology and user-behaviours, and so came together to create a web-enabled business that puts people first. **dub** approach to business is to deliver software as a service (SaaS).

Overview

We are seeking an individual that is passionate about both the interweb and open-source movement. They will have experience of developing 'social' services (blogs, wikis, forums, clouds etc), and have a strong

creative skills to pair with their technical capability.

The role is London-based and will appeal to an individual that is ahead of the game and bleeding edge.

Roles & Responsibilities

We are looking for an experienced self-starter to lead the technical development of our digital platforms and, into the future, build a team of like-minded leading web developers.

We require an individual that wants to grow with a young, dynamic and very ambitious business. It's likely that they'll be frustrated with their current role and hit a glass ceiling in terms of career development and rewards.

The person we seek will be an integral part of the development team, identifying the needs of a client / technical brief and pushing it beyond the boundary of expectations.

You will report directly into the Strategic Director, Tom Watts.

Skills & Requirements

A degree is preferable although not mandatory. It proves to us you've lived a little, and are comfortable with other people. An MA or PhD are even better, then we know you're penniless and desperate to work!

A point-of-view - it doesn't matter if it's right or wrong

A blog – it proves you've got a point of view!

Multi-lingual – our language and the computers! Ability to speak 'Client' language isn't a prerequisite, but would be an advantage.

Technical / Professional Qualifications

Experience in developing web2.0 user-experiences that have proven successful

Proven strong working relationships with previous employers

Technical

- HTML (essential)
- PHP (essential)
- Javascript (essential)
- AJAX (preferred)
- MySQL (essential)
- CSS (preferred)
- Ruby on Rails or similar framework (advantageous)

Salary

Negotiable, relevant to experience
